

# ProQuest Public Health

## The Public Health Information You Need—Convenient and Complete

Until now, there has been no single resource available to search the diverse literature for public health information. There are plenty of sources for researchers, health professionals and administrators, but many simply focus on individual patient relations versus the health of the general public.

Introducing ProQuest Public Health, a robust resource that provides more than 400 full-text, core public health publications from around the world, and a wide variety of valuable content types from top publishers.

This database uses public-health terminology resulting in better targeted searches and more exact results—for a range of key subject coverage for health including:

- Administration and Policy Making
- Biostatistics
- Children's Health
- Disease Control
- Environmental Health
- Epidemiology
- Maternal Health
- Smoking Cessation Programs
- Vaccines
- And many more

## Diverse Content Ensures Critical Health Coverage

When it comes to public health information, journals are just the beginning. ProQuest Public Health provides access to a range of critical content that researchers truly value. Key content includes:

**Top Journals**—from The Lancet to New England Journal of Medicine, health researchers can search top publications such as AIDS Education and Prevention, American Journal of Public Health, Epidemiology and Infection, Maternal and Child Health Journal, Public Health Nutrition, and many more

**Newspapers**—access to over 900 newspapers from around the world with articles updated daily in a 90-day rolling file, so users can discover the latest information on public health

**Dissertations and Theses**—over 9,000 full-text dissertations bring users valuable and vetted scholarly resources not available elsewhere

**Government Publications**—documents from the Center for Disease Control (CDC), Department of Health & Human Services, National Institute of Health (NIH), and the U.S. Food & Drug Administration provide users with key sources for their health research

**Working Papers**—for a glimpse of tomorrow's research today, users can find work in progress with working papers from SSRN (Social Science Research Network)

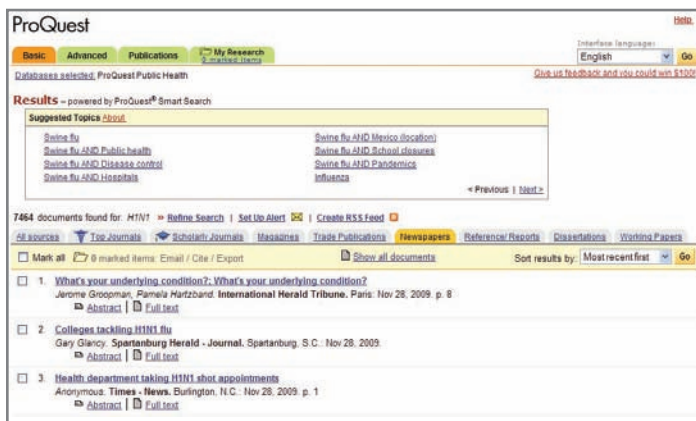

**Technical Reports**—public health reports such as National Toxicology Program Technical Report Series, and American Academy of Microbiology Critical Issues Colloquia Reports provide technical insight for researchers

**Economic Surveys**—organization for Economic Co-operation and Development (OECD) Economic Surveys provide in depth reports covering the subject of health

**Market Reports**—health-related industry reports are also included with Snapshots Series market reports and Oxford Analytica Daily Briefs providing analysis on public health topics

## Simple Yet Powerful Platform Technology

With source tabs, users can quickly access content results from across a range of sources such as Journals, Newspapers, Dissertations, Working Papers and more!

ProQuest Public Health resides on the award-winning ProQuest® platform, providing users with a robust research experience.

## Coming Soon
